

Simplifying Workforce Management

Client Success Story: Auer Precision

AUER
PRECISION

"I've worked with Time Data Systems since I started 20 years ago, and they have always exceeded my expectations for reliability."

Karen Bollong
HR and Accounting Manager

Auer Precision is a manufacturing leader in semiconductors, medical diagnostics devices, and other unique industrial applications. Founded in 1972, Fred and John, two brothers, started the company together in a simple shop. They began by making tools and dies, and have since grown to expertly manufacture those, as well as medical device components, metal stamping, plastic stamping, and more. Today, Auer Precision continues to be a market leader in both high precision and next generation product development.

Karen Bollong is proficient in the manufacturing and medical device industries and is Auer Precision's HR and Accounting Manager. For 20 years, Karen has managed how Auer Precision executes functions such as collections, applying cash deposits, bank reconciliations, and journal entries, ensuring that all ledger postings are accurate and accounted for. Karen has worked with Time Data Systems since day one, stating, "I've worked with Time Data Systems since I started 20 years ago, and they have always exceeded my expectations for reliability."

Typically, long standing prosperous relationships begin because someone has a need to fill or a problem to solve. However, Auer Precision had been working with Time Data Systems when Karen came on board with the company two decades ago and has experienced a strong relationship since. She continues to make herself aware of what the workforce management software industry has to offer, but they will not consider making a change, declaring, "Time Data Systems is just one of those few companies that is just there when we need them."

Since the days of their simple shop, Auer Precision's growth has required occasional modifications to the services they use from Time Data Systems. The reassurance Time Data Systems provides Karen is what she likes most about the working relationship, and added, "The comfort level that comes from working with people for so long is important to us. Time Data Systems does whatever they can to assist us if we need anything." The Attendance on Demand software provides Karen with continued ease and simplicity, which is vital in managing Auer Precision's 120 employees working in nine buildings.
