

Time Data Systems

Simplifying Workforce Management

Client Success Story: Fisher Sand and Gravel

“What made it work for us is that they answered questions other companies could not.”

Carl Schafer
IT Director

Carl Schafer is the IT Director at Fisher Sand and Gravel Company, a manufacturing and construction company that primarily performs heavy highway work and rock mining, often for the federal government. As with any company, tracking employee time and attendance is critical for Fisher Sand and Gravel’s success. Before using a digital time and attendance system, Fisher Sand and Gravel was using paper time cards, making it more time consuming and difficult to track employee attendance and manage vacation requests.

Carl first heard about Time Data Systems (TDS) from one of Fisher Sand and Gravel’s subsidiary companies. Carl says, “What made it work for us is that

they answered questions other companies could not.” In addition, TDS allowed Fisher Sand and Gravel to categorize their data into seven levels of hierarchy and better prepare data to be imported into the accounting system. For the past two years, Carl has been successfully using TDS to handle his company’s employee time and attendance management.

Not only has TDS provided Fisher Sand and Gravel with the time and attendance management they were looking for, but they have also provided quality customer service. Carl says “They’re readily available, and you get an answer to your issues quickly. They’ve been reliable as well.”
