

Simplifying Workforce Management

Client Success Story: Saint Theresa Parish

Saint Theresa

PARISH & SCHOOL

Established 65 years ago in Phoenix, Arizona, Saint Theresa Parish is a Catholic church and school for children PreSchool through 8th Grade. Over 12 years ago, their hourly employees asked for a time clock to provide a standardized way of tracking their work. At the time, they tracked their hours manually, and they realized that translating minutes to their hourly rate was troublesome. Employees also wanted a way to track overtime, vacation, and sick time.

Anne Field, the Bookkeeper/HR at St. Theresa, listened to her staff's request and went online researching companies with these specific features. She found a few timekeeping businesses, and one stuck out to her as the best candidate, saying, "Time Data Systems was a good price but more importantly, they had everything we were looking for and the flexibility we needed."

The Time Data Systems solution is perfect for Saint Theresa Parish. Between the products offered and the company's immediate response whenever questions

"Time Data Systems was a good price but more importantly, they had everything we were looking for and the flexibility we needed."

Anne Field
Parish Bookkeeper/HR

come up, "Our employees love it! They like seeing their own time reports and are looking forward to upgrading to utilize their smart phones in the future."

Saint Theresa Parish is scheduled to upgrade to Attendance On Demand which will give them faster and more efficient processing. Anne says that when they started looking into upgrading, a competitor of Time Data Systems approached them to switch services. Her employees expressed their desire to stay with Time Data Systems. This experience made Anne even more aware of how well Time Data Systems accommodates their needs. She realized the competing company would have required them to rent or buy a time clock unit, whereas Time Data Systems supplies them with everything they need.
